to S.R. 201
Current Construction

MOUNTAIN VIEW CORRIDOR CONSTRUCTION UPDATE

September 2020

Project Update:

Mountain View Corridor (MVC) is under construction from 4100 South to S.R. 201.

Current construction consists of two traffic lanes in each direction with signalized intersections and biking and walking trails, as well as ramp connections to S.R. 201.

MVC is using a phased construction approach designed to balance current and future transportation needs with available funds.

Mountain View Corridor from 4100 South to S.R. 201 is 70% complete!

The construction of the Mountain View Corridor from 4100 South to S.R. 201 is 70% complete and scheduled for completion in Summer 2021.

Work is dependent on equipment availability, weather, and COVID-19 delays and is subject to change.

What to Expect:

As work continues into the Fall of 2020, crews are working to complete the new roadways, trail, sound walls and bridges. This includes extensive earthwork and paving.

The project is seeing major progress where MVC will connect with S.R. 201 as well as the widening of 3500 South and 2700 South where these roads intersect the project.

If you live or work in the area, you may experience an increase in paving activities and night work through the end of 2020.
